

Payment Card Industry (PCI) Executive Report

09/09/2025

ASV Scan Report Attestation of Scan Compliance

A.1 Scan Customer Information				A.2 Approved Scanning Vendor Information			
Company:	CoinPay LCC			Company:	Sectigo Limited		
Contact Name:	Tcvirkun Dmitrii	Job Title:	CTO	Contact Name:	HackerGuardian Support	Job Title:	Manager
Telephone:		Email:	tcvirkun.dima@gmail.com	Telephone:	+1 (888) 266-6361	Email:	HackerGuardianSupport@sectigo.com
Business Address:	Sverdlova st., 11, room 327			Business Address:	3rd Floor Building 26, Office Village Exchange Quay, Trafford Road		
City:	Minsk	State/Province:		City:	Salford	State/Province:	None
ZIP/postal code:		Country:	Belarus	ZIP/postal code:	M5 3EQ	Country:	United Kingdom
URL:				URL:	https://sectigo.com/		
A.3 Scan Status							
Date scan completed	09/09/2025			Scan expiration date (90 days from date scan completed)	12/08/2025		
Compliance Status	PASS			Scan report type	Full scan		
Number of unique in-scope components scanned					1		
Number of identified failing vulnerabilities					0		
Number of components found by ASV but not scanned because scan customer confirmed components were out of scope					0		
A.4 Scan Customer Attestation							
CoinPay LLC attests on 09/09/2025 at 14:33:25 GMT that this scan (either by itself or combined with multiple, partial, or failed scans/rescans, as indicated in the above Section A.3, "Scan Status") includes all components which should be in scope for PCI DSS, any component considered out of scope for this scan is properly segmented from my cardholder data environment, and any evidence submitted to the ASV to resolve scan exceptions - including compensating controls if applicable - is accurate and complete. CoinPay LLC also acknowledges 1) accurate and complete scoping of this external scan is my responsibility, and 2) this scan result only indicates whether or not my scanned systems are compliant with the external vulnerability scan requirement of PCI DSS; this scan result does not represent my overall compliance status with PCI DSS or provide any indication of compliance with other PCI DSS requirements.							
A.5 ASV Attestation							

ASV Scan Report Summary

Part 1. Scan Information			
Scan Customer Company:	CoinPay LCC	ASV Company:	Sectigo Limited
Date scan was completed:	09/09/2025	Scan expiration date:	12/08/2025

Part 2. Component Compliance Summary	
178.163.240.23, online.coinpay.by	PASS

Part 2. Component Compliance Summary - (Hosts Not Current)

Part 3a. Vulnerabilities Noted for each Component					
Component	Vulnerabilities Noted per Component	Severity Level	CVSS Score	Compliance Status	Exceptions, False Positives, or Compensating Controls Noted by the ASV for this Vulnerability
178.163.240.23, online.coinpay.by port 22/tcp	38909 - SHA1 deprecated setting for SSH	LOW	3.7	PASS	The vulnerability is not included in the NVD. ASV Score = 3.7
178.163.240.23, online.coinpay.by	82003 - ICMP Timestamp Request CVE-1999-0524	LOW	2.1	PASS	

Part 3b. Special Notes to Scan Customer by Component			
Component	Special Note to Scan Customer	Item Noted	Per section 7.2 of the ASV Program Guide, scan customer's description of action taken and declaration that software is either needed for business and implemented securely, or removed
online.coinpay.by	Embedded links or code from out-of-scope domains	150010 - External Links Discovered (Web Application: port 443/tcp)	Yes - This software for point-of-sale (POS)
online.coinpay.by	Embedded links or code from out-of-scope domains	150010 - External Links Discovered (Web Application: port 80/tcp)	Yes - This software for point-of-sale (POS)
online.coinpay.by	Remote Access	42017 - Remote Access or Management Service Detected (SSH:port 22/TCP)	Yes - Remote access for administration

Part 3c. Special Notes Full Text	
Note	
Embedded links or code from out-of-scope domains	
Special Note to Scan Customer: Due to increased risk to the cardholder data environment when embedded links redirect traffic to domains outside the merchant's CDE scope, 1) confirm that this code is obtained from a trusted source, that the embedded links redirect to a trusted source, and that the code is implemented securely, or 2) confirm that the code has been removed. Consult your ASV if you have questions about this Special Note.	

Remote Access

Special Note to Scan Customer: Due to increased risk to the cardholder data environment when remote access software is present, please 1) justify the business need for this software to the ASV and confirm it is implemented securely, or 2) confirm it is disabled/ removed. Consult your ASV if you have questions about this Special Note.

Part 4a. Scope Submitted by Scan Customer for Discovery

IP Addresses/ranges/subnets, domains, URLs, etc.

online.coinpay.by

Part 4b. Scan Customer Designated "In-Scope" Components (Scanned)

IP Addresses/ranges/subnets, domains, URLs, etc.

178.163.240.23, online.coinpay.by

Part 4c. Scan Customer Designated "Out-of-Scope" Components (Not Scanned)

IP Addresses/ranges/subnets, domains, URLs, etc.

IP Addresses/Ranges : - (not active) Scan customer attests that this IP address is not issued/assigned to any physical or virtual host. ASV confirmed it is nonresponsive.

Report Summary	
Company:	CoinPay LLC
Hosts in Account:	1 DNS
Hosts Active:	1
Hosts Scanned:	1
Scan Date:	09/09/2025 at 11:10:32 GMT
Report Date:	09/09/2025 at 14:33:34 GMT
Report Title:	Dmitrii
Template Title:	Payment Card Industry (PCI) Executive Report

Summary of Vulnerabilities

Vulnerabilities Total	55	Average Security Risk		2.0
-----------------------	----	-----------------------	--	-----

by Severity				
Severity	Confirmed	Potential	Information Gathered	Total
5	0	0	0	0
4	0	0	0	0
3	0	0	1	1
2	1	0	5	6
1	1	0	47	48
Total	2	0	53	55

by PCI Severity			
PCI Severity	Confirmed	Potential	Total
High	0	0	0
Medium	0	0	0
Low	2	0	2
Total	2	0	2

Vulnerabilities by PCI Severity

Potential Vulnerabilities by PCI Severity

Vulnerabilities by Severity

Potential Vulnerabilities by Severity

Appendices

Hosts Scanned

online.coinpay.by

Option Profile

Scan

Scanned TCP Ports:	Full
Scanned UDP Ports:	Standard Scan
Scan Dead Hosts:	Off
Load Balancer Detection:	Off
Password Brute Forcing:	Standard
Vulnerability Detection:	Complete
Windows Authentication:	Disabled
SSH Authentication:	Disabled
Oracle Authentication:	Disabled
SNMP Authentication:	Disabled
Perform 3-way Handshake:	Off

Advanced

Hosts Discovery:	TCP Standard Scan, UDP Standard Scan, ICMP On
Ignore RST packets:	Off
Ignore firewall-generated SYN-ACK packets:	Off
Do not send ACK or SYN-ACK packets during host discovery:	Off

Report Legend

Payment Card Industry (PCI) Status

An overall PCI compliance status of PASSED indicates that all hosts in the report passed the PCI compliance standards. A PCI compliance status of PASSED for a single host/IP indicates that no vulnerabilities or potential vulnerabilities, as defined by the PCI DSS compliance standards set by the PCI Council, were detected on the host.

An overall PCI compliance status of FAILED indicates that at least one host in the report failed to meet the PCI compliance standards. A PCI compliance status of FAILED for a single host/IP indicates that at least one vulnerability or potential vulnerability, as defined by the PCI DSS compliance standards set by the PCI Council, was detected on the host.

Vulnerability Levels

A Vulnerability is a design flaw or mis-configuration which makes your network (or a host on your network) susceptible to malicious attacks from local or remote users. Vulnerabilities can exist in several areas of your network, such as in your firewalls, FTP servers, Web servers, operating systems or CGI bins. Depending on the level of the security risk, the successful exploitation of a vulnerability can vary from the disclosure of information about the host to a complete compromise of the host.

Severity	Level	Description
 1	Minimal	Intruders can collect information about the host (open ports, services, etc.) and may be able to use this information to find other vulnerabilities.
 2	Medium	Intruders may be able to collect sensitive information from the host, such as the precise version of software installed. With this information, intruders can easily exploit known vulnerabilities specific to software versions.
 3	Serious	Intruders may be able to gain access to specific information stored on the host, including security settings. This could result in potential misuse of the host by intruders. For example, vulnerabilities at this level may include partial disclosure of file contents, access to certain files on the host, directory browsing, disclosure of filtering rules and security mechanisms, denial of service attacks, and unauthorized use of services, such as mail-relaying.
 4	Critical	Intruders can possibly gain control of the host, or there may be potential leakage of highly sensitive information. For example, vulnerabilities at this level may include full read access to files, potential backdoors, or a listing of all the users on the host.
 5	Urgent	Intruders can easily gain control of the host, which can lead to the compromise of your entire network security. For example, vulnerabilities at this level may include full read and write access to files, remote execution of commands, and the presence of backdoors.

Severity	Level	Description
 LOW	Low	A vulnerability with a CVSS base score of 0.0 through 3.9. These vulnerabilities are not required to be fixed to pass PCI compliance.
 MED	Medium	A vulnerability with a CVSS base score of 4.0 through 6.9. These vulnerabilities must be fixed to pass PCI compliance.
 HIGH	High	A vulnerability with a CVSS base score of 7.0 through 10.0. These vulnerabilities must be fixed to pass PCI compliance.

Potential Vulnerability Levels

A potential vulnerability is one which we cannot confirm exists. The only way to verify the existence of such vulnerabilities on your network would be to perform an intrusive scan, which could result in a denial of service. This is strictly against our policy. Instead, we urge you to investigate these potential vulnerabilities further.

Severity	Level	Description
 1	Minimal	If this vulnerability exists on your system, intruders can collect information about the host (open ports, services, etc.) and may be able to use this information to find other vulnerabilities.
 2	Medium	If this vulnerability exists on your system, intruders may be able to collect sensitive information from the host, such as the precise version of software installed. With this information, intruders can easily exploit known vulnerabilities specific to software versions.
 3	Serious	If this vulnerability exists on your system, intruders may be able to gain access to specific information stored on the host, including security settings. This could result in potential misuse of the host by intruders. For example, vulnerabilities at this level may include partial disclosure of file contents, access to certain files on the host, directory browsing, disclosure of filtering rules and security mechanisms, denial of service attacks, and unauthorized use of services, such as mail-relaying.

	4	Critical	If this vulnerability exists on your system, intruders can possibly gain control of the host, or there may be potential leakage of highly sensitive information. For example, vulnerabilities at this level may include full read access to files, potential backdoors, or a listing of all the users on the host.
	5	Urgent	If this vulnerability exists on your system, intruders can easily gain control of the host, which can lead to the compromise of your entire network security. For example, vulnerabilities at this level may include full read and write access to files, remote execution of commands, and the presence of backdoors.

Severity	Level	Description
	Low	A potential vulnerability with a CVSS base score of 0.0 through 3.9. These vulnerabilities are not required to be fixed to pass PCI compliance.
	Medium	A potential vulnerability with a CVSS base score of 4.0 through 6.9. These vulnerabilities must be fixed to pass PCI compliance.
	High	A potential vulnerability with a CVSS base score of 7.0 through 10.0. These vulnerabilities must be fixed to pass PCI compliance.

Information Gathered

Information Gathered includes visible information about the network related to the host, such as traceroute information, Internet Service Provider (ISP), or a list of reachable hosts. Information Gathered severity levels also include Network Mapping data, such as detected firewalls, SMTP banners, or a list of open TCP services.

Severity	Level	Description
	1	Minimal Intruders may be able to retrieve sensitive information related to the host, such as open UDP and TCP services lists, and detection of firewalls.
	2	Medium Intruders may be able to determine the operating system running on the host, and view banner versions.
	3	Serious Intruders may be able to detect highly sensitive data, such as global system user lists.
